2. The following is an examiner's statement of reasons for allowance:

Concerning claims 16, 19-21,23-27,28-30 there is no prior art that teach or suggest an article with electrically conductive polymer coating comprising at least one moiety having pi electron delocalization on a substrate with the topographical surface area is greater than projected area.

Concerning claim 47-55, there is no prior art that teach or suggest an article with electrically conductive polymer coating acetylene or polyacetylene or a substituted analog thereof on a substrate with the topographical surface area is greater than projected area.

Concerning claims 31,33-44 there is no prior art that teach or suggest an a method of making an article with a shrinkable polymeric substrate and coating with dopant and permitting a monomer to contact dopant thereby forming electrically conductive coating.

Wang et al (US6,468,785) teach doped conducting polymers (see col.2 line 40-63) and Keen teach moieties with pi electron delocalization (see col.25 line 1-50) but neither reference teach or suggest shrinking the substrate or topographical surface area greater than projected surface area.
